Software consultant
@ MAN Diesel & Turbo, Magnetix, Roomioo, Geomatic A/S (C#, Angular, Frontend)

2014 - 2015 Umwelt A/S

Full Stack Developer (node.js, AngularJS, Frontend)

EDUCATION

2017 - Technical University of Denmark (DTU), Denmark

MSc in Information Technology, specializing in Software Security and Data Science.
Current GPA 8.55 (-3 to 12)

2013 - 2017 Technical University of Denmark (DTU), Denmark

BSc in Software Technology after spending my first year on Mathematics and Technology.

TECHNICAL

Software

My BSc and the first part of my MSc focused on software. I found software security and distributed systems particularly interesting, resulting in my BSc thesis being about distributed systems for which I got 12.

During my studies I learned Java, F#, Prolog, Matlab, Python, Go and Angular.

Mathematics

I am currently writing my master thesis in the field of deep learning, utilizing my software skills and the PyTorch framework to apply NLP techniques to classification tasks in biology.

PERSONAL INTERESTS

I have a passion for new technologies and design which resulted in a lot of small web development projects besides my studies. I love sports that have a social aspect to it, and have been an active participant in the events that have been available through studies and work. During my third year of studies, I was a tutor for the new students to come, which have been one of the most self-insightful experiences of my life. When I'm not coding, you are likely to find me on a pair of water skis or in the front to a concert!
